## Project data and GIS Methodology & Development

### GIS Methodology

Jointly for our common future

**SOUTH EAST EUROPE**  
 Transnational Cooperation Programme

 Program supported by the  
 EUROPEAN UNION

## Donauregionen+

### Geodatabase Structure

**Preliminary version  
(22.11.2010)**

Jointly for our common future

Workshop 7, Bratislava, 24 – 25.11.2010

**SOUTH EAST EUROPE**  
 Transnational Cooperation Programme

 Program supported by the  
 EUROPEAN UNION

## GIS Methodology

GIS geographic data for project outputs elaboration should be created with following properties:

- Relevant coordinate system
- ESRI – Data format
- xBase file format convention attributes
- Software ArcGIS (recommended) or ArcView GIS from ESRI

Jointly for our common future

Workshop 7, Bratislava, 24 – 25.11.2010

**SOUTH EAST EUROPE**  
 Transnational Cooperation Programme

 Program supported by the  
 EUROPEAN UNION

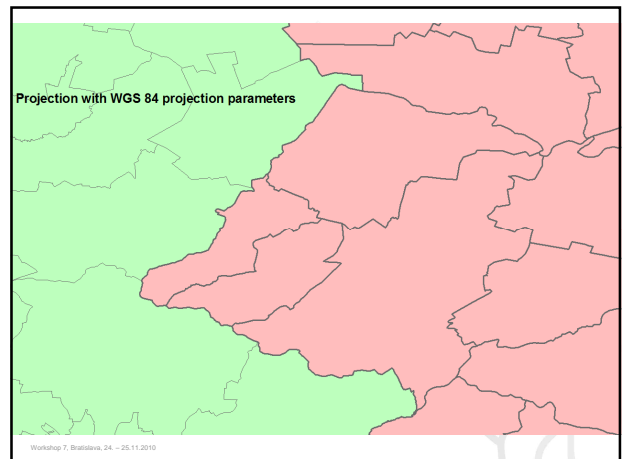

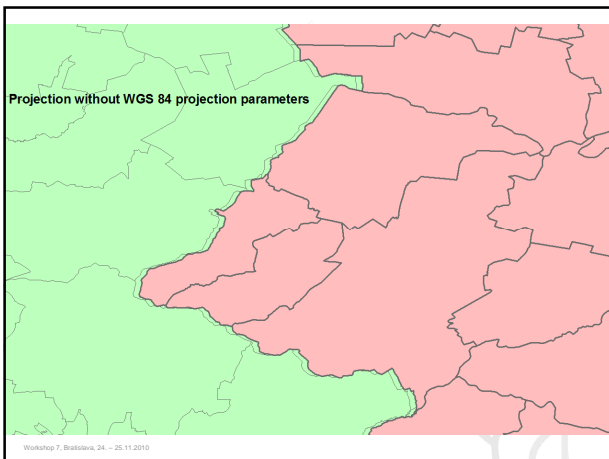

## GIS Methodology

GIS geographic data for project outputs elaboration should be created in the following Coordinate systems:

- **National coordinate system with corresponding PRJ file with National to WGS 1984 / ETRS 1989 Transformation parameters (see Methodology, Appendix A)**
- ETRS 1989 (European Plate Coordinate System)
- WGS 1984 (World Geodetic System)

Jointly for our common future

Workshop 7, Bratislava, 24 – 25.11.2010

**National Coordinate Systems – Not Completed**

List of National Coordinate Systems with Geodetic Datum Transformation Parameters from to ETRS-89 and WGS-84

Country	Projection Coordinate System	Ellipsoid (Datum)	Projection Name	Transformation Parameters Name	dx	dy	dz	kx	ky	kz	s	
Bulgaria	Publucio 1942 OK_Zona 4	Balkan 1954	Krazevsky 1942	Gauss-Krüger	Publucio 1942 to ETRS 1989 (3)	24.000000	-121.000000	84.300000	-0.020000	0.250000	0.130000	1.1000000000

**Valid transformation parameters**  
 dx, dy, dz – Station offset X, Y and Z axis in meters  
 kx, ky, kz – Station aspect X, Y and Z axis in seconds  
 s – Scale Difference in ppm (parts per million)

**Missing parameters to be discovered, tested and verified**

Jointly for our common future

Workshop 7, Bratislava, 24 – 25.11.2010

**SOUTH EAST EUROPE**  
Transnational Cooperation Programme

**GIS Methodology**

GIS geographic data for project outputs elaboration should be created in the following data formats:

- ESRI – Personal Geodatabase
- ESRI – Shapefile (i.e. DBF, SHP, SHX, PRJ, CPG files)
- ESRI – File Geodatabase
- ESRI – ArcInfo coverage
- ESRI – PC ArcInfo coverage
- File Names written in ASCII alphanumeric characters (A – Z, a – z, 0 – 9 and “\_”) in English language.

Workshop 7, Bratislava, 24 – 25.11.2010

**SOUTH EAST EUROPE**  
Transnational Cooperation Programme

**GIS Methodology**

GIS geographic and/or attribute data should be created in the **xBase file format convention** in English language:

- Field Name:**
  - Only upper alphanumeric characters (A – Z, 0 – 9 and “\_”)
  - Maximum name length 10 characters (i.e. NUTS4\_NAME)
  - Does not begin with number (i.e. 2\_ND)
- Data Codepage:**
  - Windows 1250 Central European (HR, HU, MD, RO, RS, SK)
  - Windows 1251 Cyrillic (BG, UA)
  - Cyrillic names should be written also in Latin transcription

Jointly for our common future

Workshop 7, Bratislava, 24 – 25.11.2010

**SOUTH EAST EUROPE**  
Transnational Cooperation Programme

**GIS Methodology**

GIS data should be produced (finalized) in ArcGIS or ArcView:

- Correct topology:**
  - No overlap or gaps for polygon data
  - No useless dangle or pseudo nodes for polyline data
  - No duplicate for point data
  - If possible done by defining ArcGIS topology rules
- Project formats:**
  - MXD project format for ArcGIS version 9.2 and higher
  - APR project format for ArcView GIS version 3.2 and higher

Jointly for our common future

Workshop 7, Bratislava, 24 – 25.11.2010

**Polygon**

**Must not overlap**

Polygons must not overlap within a feature class or subtype. Polygons can be disconnected or touch at a point or touch along an edge.

Polygon errors are created from areas where polygons overlap.

Use this rule to make sure that no polygon overlaps another polygon in the same feature class or subtype.

A voting district map cannot have any overlaps in its coverage.

**Point**

**Must be properly inside polygons**

Points in one feature class or subtype must be inside polygons of another feature class or subtype.

Point errors are created where the points are outside or touch the boundary of the polygons.

Use this rule when you want points to be completely within the boundaries of polygons.

State capitals must be inside each state.

**Line**

**Must not have dangles**

The end of a line must touch any part of one other line or any part of itself within a feature class or subtype.

Point errors are created at the end of a line that does not touch at least one other line or itself.

Use this rule when you want lines in a feature class or subtype to connect to one another.

A street network has line segments that connect. If segments end for dead-end roads or cul-de-sacs, you could choose to set as exceptions during an edit session.

**Line**

**Must not have pseudonodes**

The end of a line cannot touch the end of only one other line within a feature class or subtype. The end of a line can touch any part of itself.

Point errors are created where the end of a line touches the end of only one other line.

Use this rule to clean up data with inappropriately subdivided lines.

For hydrologic analysis, segments of a river system might be constrained to only have nodes at endpoints or junctions.

## Current GIS Data Situation

**Current Layer Status:**

- O.K.** – GIS Layer and Attribute Data looks to be elaborated according project methodology
- Available** – GIS Layer looks to be O.K. but Attribute Data are still missing or not elaborated according methodology
- Derivable** – GIS Layer and / or Attribute Data can be derived from other layer which is O.K. or available
- Missing** – GIS Layer and Attribute Data are still missing
- N/A** – GIS Layer and / or Attribute Data are not available for project partner country

## TABULAR DATA FOR NUTS3, CBR AND COUNTRIES

Non geographical data for project elaboration should be created with following properties:

- Organization of relevant non graphical data in the tables
- Stored in xBase (DBF), Excel (XLS) or Access (MDB) format
- xBase file format convention of attribute (field) names
- Tables contain necessary data for all defined time horizons
- Data selection by information stored in the field **YEAR**
- Calculation of NUTS3 and / or Cross Border Regions
- Geographical analysis and producing of maps and schemes

Jointly for our common future

Workshop 7, Bratislava, 24 – 25.11.2010

**NUTS 3 Transport Indicators – Table data structure (Proposal)**

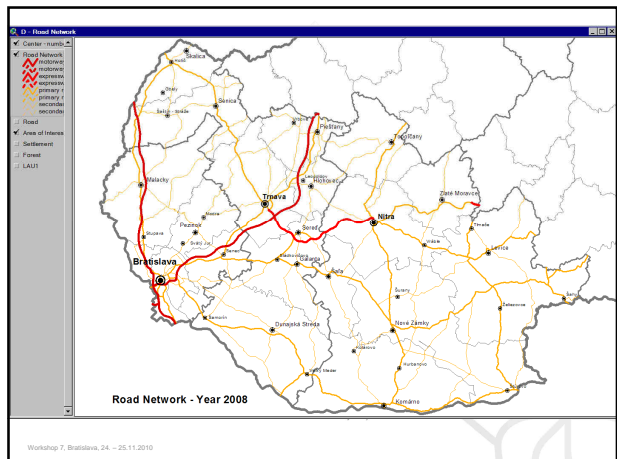

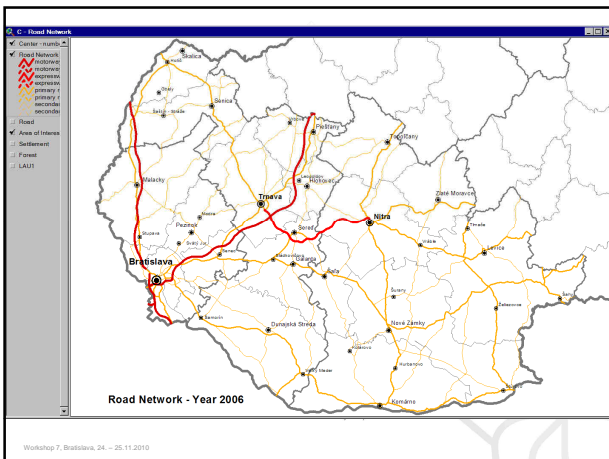

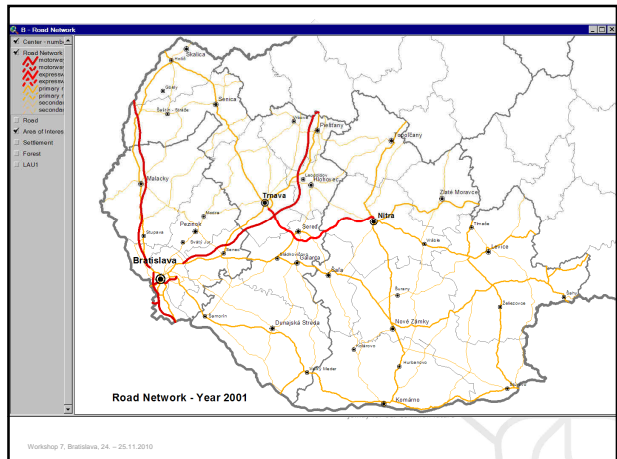

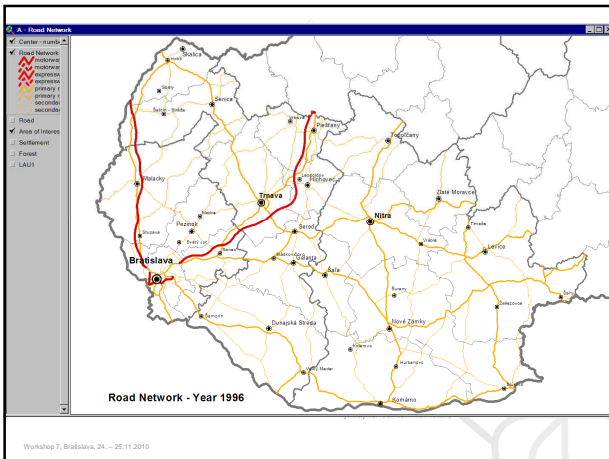

Field Name	Field Type	Field Length	Field Description
NUTS3	Character	5	NUTS 3 code according Eurostat
NUTS3_NAME	Character	32	NUTS 3 name according Eurostat
MW_LENGTH	Numeric	6.1	Length of motorways in km
EW_LENGTH	Numeric	6.1	Length of expressways in km
1st_CLASS_LENGTH	Numeric	6.1	Length of 1st class roads in km
2nd_CLASS_LENGTH	Numeric	6.1	Length of 2nd class roads in km
ME_SHARE	Numeric	5.3	Share of motorways and expressways in km/km <sup>2</sup>
ME_DENSITY	Numeric	5.3	Density of motorways and expressways in km/km <sup>2</sup>
RI_LENGTH	Numeric	6.1	Length of railways of international importance in km
RI_LENGTH	Numeric	6.1	Length of national and regional importance railways in km
RI_SHARE	Numeric	5.3	Share of international importance railways in km/km <sup>2</sup>
RI_DENSITY	Numeric	5.3	Density of international importance railways in km/km <sup>2</sup>
PT_PASSENGER	Numeric	7	Count of passengers transported by ports
PT_FREIGHT	Numeric	7	Amount of freight transferred by ports in tons
PT_P_1000	Numeric	7.2	Share of passengers per 1 000 inhabitants
PT_F_1000	Numeric	7.2	Share of transferred freight per 1 000 inhabitants
PT_ACCESS	Numeric	6.2	Share of inhabitants living within 60 km from ports
AP_PASSENGER	Numeric	7	Count of passengers transported by airports
AP_FREIGHT	Numeric	7	Amount of freight transferred by airports in tons
AP_P_1000	Numeric	7.2	Share of passengers per 1 000 inhabitants
AP_F_1000	Numeric	7.2	Share of transferred freight per 1 000 inhabitants
AP_ACCESS	Numeric	6.2	Share of inhabitants living within 80 km from airports
TEN_LENGTH	Numeric	6.1	Length of TEN-T Corridors
TEN_DENSITY	Numeric	5.3	Density of TEN-T Corridors
YEAR	Numeric	4	Year (time horizon) of data validity

The specification of GS Transport and Technical Infrastructure attribute data is under the responsibility of Sertsan partner.

Workshop 7, Bratislava, 24 – 25.11.2010

Jointly for our common future

Workshop 7, Bratislava, 24 – 25.11.2010

**NUTS 3 Technical Infrastructure Indicators – Table data structure (Proposal)**

Field Name	Field Type	Field Length	Field Description
NUTS3	Character	5	NUTS 3 code according Eurostat
NUTS3_NAME	Character	32	NUTS 3 name according Eurostat
EE_DWELL	Numeric	7	Count of dwellings connected to electric energy
EE_SUPPLY	Numeric	6,2	Share of dwellings connected to electric energy per cent
NG_DWELL	Numeric	7	Count of dwellings connected to natural gas
NG_SUPPLY	Numeric	6,2	Share of dwellings connected to natural gas per cent
DW_DWELL	Numeric	7	Count of dwellings connected to drinking water
DW_SUPPLY	Numeric	6,2	Share of dwellings connected to drinking water per cent
WW_DWELL	Numeric	7	Count of dwellings connected to waste water treatment
WW_TREATM	Numeric	6,2	Share of dwellings connected to waste water treatment per cent
BI_DWELL	Numeric	7	Count of dwellings connected to broadband internet
BI_CONNECT	Numeric	6,2	Share of dwellings connected to broadband internet per cent
RE_CAPACIT	Numeric	7	Capacity of regional renewable energy sources in MW
RE_1000	Numeric	6,2	Capacity of regional renewable energy sources in MW per 1 000 inhabitants
YEAR	Numeric	4	Year (time horizon) of data validity

The specification of GS Transport and Technical Infrastructure attribute data is under the responsibility of Serbian partner.

Jointly for our common future

Workshop 7, Bratislava, 24 – 25.11.2010

**NUTS 3 Nature Condition Indicators – Table data structure (Proposal)**

Field Name	Field Type	Field Length	Field Description
NUTS3	Character	5	NUTS 3 code according Eurostat
NUTS3_NAME	Character	32	NUTS 3 name according Eurostat
WSS1	Numeric	2	Count of water sampling sites of 1 <sup>st</sup> water quality class
WSS2	Numeric	2	Count of water sampling sites of 2 <sup>nd</sup> water quality class
WSS3	Numeric	2	Count of water sampling sites of 3 <sup>rd</sup> water quality class
WSS4	Numeric	2	Count of water sampling sites of 4 <sup>th</sup> water quality class
WSS5	Numeric	2	Count of water sampling sites of 5 <sup>th</sup> water quality class
WPI	Numeric	5,3	Water pollution index
SO2	Numeric	7	Atmosphere pollution SO <sub>2</sub> in tons
SO2_1000	Numeric	6,2	Atmosphere pollution SO <sub>2</sub> in tons per 1 000 inhabitants
NOX	Numeric	7	Atmosphere pollution NO <sub>x</sub> in tons
NOX_1000	Numeric	6,2	Atmosphere pollution NO <sub>x</sub> in tons per 1 000 inhabitants
PM10	Numeric	7	Atmosphere pollution ash in tons
PM10_1000	Numeric	6,2	Atmosphere pollution ash in tons per 1 000 inhabitants
CO	Numeric	7	Atmosphere pollution CO in tons
CO_1000	Numeric	6,2	Atmosphere pollution CO in tons per 1 000 inhabitants
LFCAPACITY	Numeric	7	Capacity of landfills in tons
LFCAP_1000	Numeric	6,2	Capacity of landfills in tons per 1 000 inhabitants
YEAR	Numeric	4	Year (time horizon) of data validity

The specification of GS Transport and Technical Infrastructure attribute data is under the responsibility of Slovak partner.

Jointly for our common future

Workshop 7, Bratislava, 24 – 25.11.2010

**SOUTH EAST EUROPE**  
Transnational Cooperation Programme

**TABULAR DATA FOR NUTS3**  
**Tasks and Responsibility**

The definition of non geographical tabular data structure is under the responsibility of each GS responsible partner

Missing definition of the following NUTS3 tabular data structure:

- Human Resources & Settlement Structure (Bulgaria)
- Economy (Hungary)

The elaboration of all tabular data for NUTS3 regions are in the responsibility of each (national) project partners

Jointly for our common future

Workshop 7, Bratislava, 24 – 25.11.2010

**SOUTH EAST EUROPE**  
Transnational Cooperation Programme

**Donauregionen+**  
**Geodatabase Structure**

**We are still waiting to your cooperation, recommendations, comments, notes, questions and of course help...**

Jointly for our common future

Workshop 7, Bratislava, 24 – 25.11.2010

**SOUTH EAST EUROPE**  
Transnational Cooperation Programme

**Portal & GIS Server**

Upgrade on ArcGIS Server 10.0 basis

- **Project web:** [www.donauregionen.net](http://www.donauregionen.net)
- **GIS Server:** [gis.donauregionen.net](http://gis.donauregionen.net)
- **Project portal:** [dplus.infoprojekt.sk](http://dplus.infoprojekt.sk)

- Portal & GIS Server are under construction – Work and Test mode
- Maps are available online during working days from 8:00 to 16:00 CET
- Number of maps: currently **20 maps**

Jointly for our common future

Workshop 7, Bratislava, 24 – 25.11.2010

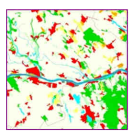

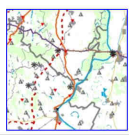

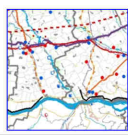

The Spatial Development of Interregional Co-operation in the Danube Space
