

## **Conception of Regions Co-operation in the Spatial Arrangement and Development of the Danube Area**

**„DONAUREGIONEN +”**

**WP4: Analysis completion**

**T TYPOLOGY OF REGIONS**

## Typology of Regions in the Danube Area Typology

The aim was to obtain results reflecting the summary ranking as a basis for the establishment of a general typology of the Donauregionen regions. It is necessary to mention, that this summary ranking was based mainly on quantitative indicators and the regions were compared among themselves. According to this analyse the following four types of regions were defined:

|                             |  |
|-----------------------------|--|
| Type A – developed regions  | Bratislavský kraj, Municipiul Bucuresti, Beogradska oblast, Južnobačka oblast  |
| Type B – stabilized regions | Budapest főváros, Judetul Constanta, Trnavský kraj, Pest megye, Nitriansky kraj, Judetul Dolj, Judetul Mehedinti, Fejér megye, Srednjobanatska oblast, Gör-Moson-Sopron megye  |
| Type C – stagnant regions   | Južnobanatska oblast, Veliko Tarnovo, Izmail'skiy rayon, Judetul Ilfov, Komárom-Esztergom megye, Zapadnobačka oblast, Sremska oblast, Judetul Galati, Ruse, Podunavska oblast, Vidin, Borska oblast, Judetul Caras-Severin, Tolna megye, Bács-Kiskun megye, Judetul Tulcea, Baranya megye, Braničevska oblast, Judetul Ialomita, Judetul Braila, Pleven, Kiliiškiy rayon, Renniiškiy rayon, Judetul Calarasi, Vratsa |
| Type D – depressed regions  | Judetul Olt, Judetul Teleorman, Montana, Silistra, Razgrad, Judetul Giurgiu, Osječko-baranjska županija, Vukovarsko-srijemska županija, Moldavian Danube Area  |

According to this summary evaluation it is clearly visible that the majority of the regions belong to the Type B group (25) and the Type C group (10). Only four regions belong to the Type A group and nine regions belong to the Type D group. Therefore we can conclude that the monitored regions are homogenous and the majority of the regions have attributes of the second and third group of regions.

The four groups, in accordance with the summary evaluation, have the following main characteristics:

### Developed Regions (Type A)

- Economic potential with diversified economic structure focused on sophisticated production and services
- Quality of human and innovation potential
- High level of territory urbanization and equipments in the region
- Polycentric settlement character
- Region accessibility, location on multimodal corridors
- High level of landscape protection and presence of air, water and soil pollution sources
- Sufficiency of internal development sources

### Stabilized Regions (Type B)

- The economic basis is constituted by industry branches
- Labour force availability (quantitative and qualitative)

- Sufficient transport infrastructure facilities (area with high transport infrastructure capacity)
- Settlement system characterized by an important share of small municipalities – resulting in migration movements, influencing the level of equipment of the territory
- Lower grade of concentration of air, water and soil pollution sources

#### **Stagnating Regions (Type C)**

- Decrement of traditional economic basic branches in the region
- Not enough dynamic change into a new economic structure
- Disposable human potential
- Disposable basic transport and technical infrastructure
- Settlement structure is relatively stable without any significant population migration
- Natural conditions in good condition – lower air, water and soil pollution level

#### **Depressed Regions (Type D)**

- The main factor of the economic development is a low level of economic basis diversification, sensitivity to strong changes of market conditions
- Economic basis decline causes population migration (mainly young people with higher qualification)
- demographic structure deterioration, ageing of population
- A lot of small municipalities with population decline
- Low transport accessibility and low level of technical infrastructure equipment in the region
- Natural conditions in good condition with possibilities for a new functional usage
- Lack of internal development sources

The Typology of Regions in the Danube Area Presented through the Tables.

The table introduced below presents the typology of the regions according to the ranking results and the classification into the four above mentioned groups, for each General Scheme separately and the summary evaluation as well.

a) Natural Conditions

| NUTS3 | Region                        | State    | WPI_Indicator | Index | atm_SO2_Indicator | Index | atm_No <sub>x</sub> _Indicator | Index | atm_ash_Indicator | Index | atm_CO_Indicator | Index | landfills_capacity_Indicator | Index | Indicators_count | Fulfilled_count | YES/NO | Average | Typology |
|-------|-------------------------------|----------|---------------|-------|-------------------|-------|--------------------------------|-------|-------------------|-------|------------------|-------|------------------------------|-------|------------------|-----------------|--------|---------|----------|
| SK010 | Bratislavský kraj             | Slovakia | 2,976         | 0,41  | 13,74             | -2,76 | 9,71                           | -1,01 | 1,32              | -2,49 | 5,65             | -2,78 | 940,15                       | -3,00 | 6                | 6               | YES    | -1,94   | TYPE C   |
